 QUARELLA'S PRODUCTS FOR

WELL
 BUILDING STANDARD®

WELL Building Standard™ is:

- a performance-based system that explores how design, operations and behaviors within the places where we live, work, learn and play can be optimized to advance human health and well-being.

- a flexible building standard and represents the future of design; It's the first rating system to focus exclusively on the impacts of buildings on human health and wellness.

WELL Certified spaces can help create an environment that can improve efficiency, mood and sleep patterns.

WELL Building Standard can be applied in many real estate sectors. The certification establishes the performance requirements in ten categories, or concepts, related to occupant health and well-being in the built environment:

Air

Water

Nourishment

Light

Movement

Thermal Comfort

Sound

Materials

Mind

Community

Projects that pursue the WELL certification are evaluated on the points earned in the different categories specified above. Based on the number of points obtained, a project receives one of the three WELL rating levels: Silver, Gold or Platinum.
